## WHAT IS CLAIMED IS:

A surface-mountable PTC thermistor element comprising:

a thermistor element body including a top surface and a bottom surface;

electrodes disposed  $q^n$  the top surface and the bottom surface of the thermistor element body;

lower and upper terminals arranged such that each of the electrodes is connected with a respective one of the lower and upper terminals, and each of the lower and upper terminals is extended downward;

wherein a vertical-leg portion of the lower terminal is placed inside the thermistor element body in a radial direction from an buter edge of the thermistor element body.

- A surface-mountable PTC thermistor element according to Claim 1, wherein said vertical-leg portion of the lower terminal is located in the vicinity of the center of the thermistor element body.
- A surface mountable PTC thermistor element according to Claim \1, wherein a junction portion of the upper terminal and one of the electrodes are arranged to overlap each other at a central portion of the thermistor

element body.

- A surface-mountable PTC thermistor element according to Claim 1, wherein the thermistor element body has a substantially round button shape.
- 5. A surface-mountable PTC thermistor element according to Claim 1, wherein each of the electrodes includes a nickel layer and a silver layer.
- A surface-mountable PTC thermistor according to Claim 1, wherein each of the terminals has a flat-plate shaped configuration and is made of stainless steel.
- 7. A surface-mountable PTC thermistor according to Claim 1, wherein a lower end of the vertical-leg portion is bent to define a horizontal connection portion.
- A surface-mountable PTC thermistor according to Claim 1, wherein the lower terminal has a junction portion connected with one of the electrodes at a location only near the central portion of the thermistor element body.
- 9. A surface-mountable PTC thermistor according to Claim 1, wherein the upper terminal includes a vertical-leg

LOGUETE, SERVED

(out

portion that is longer than the vertical-leg portion of the lower terminal.

- 10. A surface-mountable PTC thermistor according to Claim 9, wherein a lower end of the vertical-leg portion of the upper terminal is bent to define a horizontal connection portion.
- 11. A method of mounting a surface-mountable PTC thermistor element, the method comprising the steps of:

holding the PTC thermis or element via an element-holder; and

surface-mounting the thermistor element onto a mounting target, the thermistor element being a surface-mountable PTC thermistor element having a thermistor element body and electrodes formed on a top surface and a bottom surface of the thermistor element body, and upper and lower terminals arranged such that each of the electrodes is connected with a respective one of the upper and lower terminals, the upper and lower terminals being arranged to extend downward;

wherein a vertical-leg portion of the lower terminal is placed inside the thermistor element body in a radial direction from an outer edge of the thermistor element body, and an area of the thermistor element body that is held by said element holder and at least a part of said vertical-leg

portion overlap each other in a vertical direction, and the thermistor element body is held by said element holder to be surface-mounted onto the mounting target.

- 12. The method according to Claim 11, wherein said vertical-leg portion of the lower terminal is located in the vicinity of the center of the thermistor element body.
- 13. The method according to Claim 11, wherein a junction portion of the upper terminal and one of the electrodes are arranged to overlap each other at a central portion of the thermistor element body.
- 14. The method according to Claim 11, wherein the thermistor element body has a substantially round button shape.
- 15. The method according to Claim 11, wherein each of the electrodes includes a nickel layer and a silver layer.
- 16. The method according to Claim 11, wherein each of the terminals has a flat-plate shaped configuration and is made of stainless steel.
  - 17. The method according to Claim 11, wherein a lower

end of the vertical-leg portion is bent to define a horizontal connection portion.

- 18. The method according to Claim 11, wherein the lower terminal has a junction portion connected with one of the electrodes at a location only near the central portion of the thermistor element body.
- 19. The method according to Claim 11, wherein the upper terminal includes a vertical-leg portion that is longer than the vertical-leg portion of the lower terminal.
- 20. The method according to Claim 19, wherein a lower end of the vertical leg portion of the upper terminal is bent to define a horizontal connection portion.
